

Origins. We are proud of where we've come from – our Golder heritage, our people and our expertise

We're always developing better ways to mine – to help our customers succeed

We have the foresight to mitigate future risks and challenges that might affect projects and our customers

WSP Mining.

# Grounded in tomorrow

We are knowledgeable experts in mining – ready to kick-start your next project today

Subtle play on the industry we work in and the interaction with natural environments

Always one step ahead – thinking about our future impacts on the places we operate in

# WSP Mining.

## Grounded in tomorrow.

### Minifesto

We are proud of our origins – our strong, deep roots make us the specialists we are today, with the people and expertise to drive positive change with mining.

As an essential force behind the green transition, we strategically approach every interaction with the environments and communities we work in, to sustainably deliver what's needed now, with foresight of tomorrow's challenges, risks and impacts.

WSP Mining is full-service, meaning we have the knowledge and skills to add value at every step of a mine's life cycle, and the power to constantly develop better mining practices for the future.

Our people shape every project into something we can all be proud of and we're always looking for new forward-thinking pacesetters to join our collective.

We see the good in our industry.  
We mine with our eyes wide open.  
We can tackle the now, and are taking mining where it needs to go.

## WSP Mining.

### We are Grounded in tomorrow

## Option 1

A simple, recognisable, animatable visual, that speaks to the ripple effect of WSP's experience on mining today and in the future.

# We built the future under a mountain in Indonesia.

Building a paste plant in an area of tightly packed peaks demanded next level ingenuity – so we built it underground, in one of the most remote, complex mining operations in the world that built its foundations on future impacts.

Designing a cyclone station, fit to handle 140,000 tonnes of tailings a day, was an integral part of our responsible management solutions at QB2 – a mine destined for future growth.

**We created  
a cyclone  
in Chile  
to tackle  
tailings.**
