Q3 ELH Features & Releases Reach Article[July 2024]

Project Stage: Review

TITLE [WIP]: Reintroduce yourself to Reach 360

Reach 360 is a frictionless learning management system (LMS) that quickly puts training directly into the hands of your learners.

Let's recap some of our latest and greatest features, and learn more about how Reach 360 simplifies training distribution by discovering the features that help you bypass typical LMS roadblocks and make training easier to share and access.

QR Code Registration

Allow new users to register for training directly from their mobile devices with [QR code registration](#).

Customize Self-Registration

Give your learners a warm welcome and any info they need to be successful as they begin training in Reach 360. Reach 360 admins can [customize self-registration pages](#) can customize the header and body text.

SSO for Learners and SCIM Support for Learners

[Manage learners and groups in SSO more efficiently with SCIM support for learners](#). Single sign-on (SSO) gives learners access to training using one set of login credentials, training in Reach 360 is simpler than ever. Organizations with SSO enabled can automate user provisioning using System for Cross-domain Identity Management (SCIM), saving Reach 360 admins time and connecting learners with training more efficiently.

Project Stage: Review

Microsoft Teams Integration

By [connecting Reach 360 and Microsoft Teams](#), Reach admins can send learners due date and enrollment notifications, share rich previews of training, and more in the flow of work. It's a win-win for admins and learners alike – admins save time with automation and learners can easily stay up to date on training.

Slack Integration

Send enrollment notifications and due date reminders in the app learners use every day. The Reach 360 Slack integration lets authors share rich previews of their courses and notify admins when they've submitted for publishing. [Check out this article for more details.](#)

Refine Distribution and Tracking in Learner Profile Fields

Reach 360 admins can [create and add custom learner profile fields](#) to the learner registration page to collect information like job ID, title, and location. Using drop-down or text fields, collecting this information can help admins better understand who is taking their training or improve their reporting capabilities. These learner profile fields are visible to Reach 360 admins in individual records on the "analyze" tab and are available in CSV reports.

Project Stage: Review

Group-Level Active Learner Reporting

Sharing Reach 360 learning costs across business units, departments, organizations, or groups? [Easily filter the active learner usage report](#) by groups to see how many active learners each group used during each time period.

Custom Learner Notification Timing

Want to make sure that everyone completes their training by the deadline? Reach 360 admins [choose when and how often learners receive email reminders](#) for new, in-progress, and overdue training.

Custom Certificates

Brand your course completion certificates, or include accreditation requirements on them. [With the Reach 360 certificate editor](#), you can include company information like logos and learner performance details like course duration, quiz scores, and more. Plus, save time by creating a library of certificate templates to use in any course in Reach 360.

Reporter Role

Streamline reporting for different groups in Reach 360 by [assigning users to the reporting role](#). Reach 360 admins can grant access to view analytics from one or more specific groups—no more wading through training data for all learners to get access to the targeted information they're looking for.
